

Arlington Water Reclamation Facility

Meeting city needs, benefitting the public, and protecting the environment

Retrofitted Aeration Blowers

Economical implementation of MBR technology and other facility upgrades offer long-term benefit to the environment and Arlington ratepayers.

New MBR Technology

Upgraded Headworks

Repurposing and upgrading existing structures and equipment offers significant cost and energy savings – a 20% reduction in energy consumption and a savings of about \$100,000 per year!

Improved public perception and effective public outreach.

A Point of Pride for the City of Arlington

The teamwork, innovation, and ingenuity that went into the development of the new Arlington Water Reclamation Facility resulted in an economical implementation of state-of-the-art treatment technology that can meet the City's needs for years to come.
