Dear Amy Rusko

I'm a VERY concerned resident of Glen Eagle, 18508 Woodlands Way. We live less than a football field away from the proposed Hot dip galvanizing plant, second house in off of 67th. In order to research this issue I need to know exactly what MSDS/SDS process that is proposed to be worked.

When I worked in this environment I knew the precautions I needed to take. I knew the medical history that was developed for long term effects of exposure to hazardous materials. The thing I would like to understand is the precautions that are being taken to protect the public. I live closer to this proposed plant than some employees who work in companies in non hot dip departments that were monitored. I need to know how my family and the community will be protected. Also warned of any accidents that could / will happen.

Has there been a study taken to understand the property values affected by this plant?

I would really like to know what knowledge you have in the hot dip, galvanizing processes.

A VERY concerned,
Frank Losos
