Subject: Hot dip galvanized plant concerns
Date: Monday, June 24, 2024 12:10:43 AM

This message is from an External Sender

This message came from outside the City of Arlington

Hello,

I am writing in my concerns for the safety and wellbeing of not just myself but all residents in Arlington on the possibility of this Hot Dip Galvanized plant moving into 18520 67th Ave. The close proximity to residential homes for this type of commercial establishment is highly concerning. What type of environmental studies are being conducted to insure the residents that we will not be exposed to the toxic fumes this type of plant emits? How will the city protect its residents from the toxins seeping into the ground and our water supply? How will the city protect the residents from breathing in the toxic fumes that can cause cancer? The fumes that can travel to all the homes and elementary school nearby is terrifying. The way this city's infrastructure is designed is not ideal for this type of business with commercial buildings being placed right next to residential homes without the care or thought on what type of dangerous businesses reside or plan to reside. It's absolutely horrendous having the Pot facility on 67th with the fumes it emits all the way up to Pioneer Elementary, while kids are outside at recess is disgusting, but now the possibility of the hot dip galvanized plant?! Please tell me the city isn't actually entertaining this idea?

Thank you,

Sandra Matthews
