Dear Ms. Rusko,

I am writing in response to the proposed Hot Dip Galvanizing Process Plant near the entrance of Gleneagle. This plant poses a significant health risk to the residents who live in Gleneagle. This is a bedroom community with many families with children and retired homeowners. This type of plant is not suitable for a residential area because this plant produces toxic fumes which are harmful and can cause long-term health problems. Right across the street from this proposed plant is the school bus pick-up and drop-off area for the neighborhood children to wait for their buses.

This plant is totally unsuitable for this area and I would ask that you reconsider and ultimately decline this proposal.

Thank you,

Mr. and Mrs. Robert MacNeal
