Hello,

In regards to the hot dip galvanizing process plant that is being proposed at 18520 67th Ave, I have serious concerns. We need to consider the effects that toxic fumes and waste could have on our neighborhoods and Bill Quake Memorial park in the nearby vicinity, as well as wild life preserves in the area, such a Portage Creek Wildlife Area.

There is concern that any fumes or waste could have a potential effect on any other infrastructure such as our water treatment plant or the Stillaguamish River thats within 2.5 miles radius of the proposed building site. Have any studies been done on the potential effects this could have on our health and ecosystem?

Thank you for considering my comments and your time,
Shalee
