This message came from outside the City of Arlington

Amy Rusko,

If the rumors are accurate, Shame on you and your team if you allow this hot dip galvanizing process plant to take residence as proposed at the doorsteps of our residential neighborhood.

I understand the need to grow and build our community, the bottom line of course to generate revenue but not at the risk of the health of all the residents. The proposed location at 18520 67th Ave is not an ideal location, I'm sure if we put all of our heads together we can find a better solution.

Let's put the \$\$ signs away for the moment and put the people first. I'm very confident we can find an alternative location that everyone can live with (No Pun Intended)

If you took the time to read this to the end I thank you for doing so.

PS: I know this is not your area but, Can we please move on from the design phase and start moving some earth and widening our cities major Highway 531 (172nd Street) This widening project is long overdue. I'm not up to date but I believe this is Arlington public works director Jim Kelly's project.

I know this is not your question to answer but what is the delay? Funding, Staffing, both? Something else? I'm so tired of hearing Covid this and Covid that! At some point we have to stop using it as an excuse and rise above it.

I know I speak for many, the frustration is growing trying to commute through Hwy 531 during peak hours.

Again Thank You

David Thomas Proud Gleneagle resident
